

A10

Data Sheet

Thunder SSLi

Real-Time Visibility Into Encrypted Traffic

The most comprehensive decryption solution, A10 Thunder® SSLi® (SSL Insight) decrypts traffic across all ports, enabling third-party security devices to analyze all enterprise traffic without compromising performance.

Eliminate the Blind Spot

Thunder SSLi eliminates the blind spot introduced by SSL encryption by offloading CPU-intensive SSL decryption and encryption functions from third-party security devices, while ensuring compliance with privacy standards.

While dedicated security devices provide in-depth inspection and analysis of network traffic, they are not designed to decrypt and encrypt traffic at high speeds. In fact, many security products do not have the ability to decrypt traffic at all.

Thunder SSLi boosts the performance of the security infrastructure by decrypting traffic and forwarding it to one or more third-party security devices, such as a firewall for deep packet inspection (DPI).

Thunder SSLi re-encrypts traffic and forwards it to the intended destination. Response traffic is also inspected in the same way.

Benefits

Gain Full Visibility

Into The Blind Spot

Thunder SSLi decrypts traffic across all ports and multiple protocols, eliminating the encryption blind spot and enabling the security infrastructure to inspect previously invisible traffic, detect hidden threats and defend against them.

Decrypt Traffic

for All Security Devices

To truly secure an enterprise network, from both internal and external threats, organizations require the help of a variety of security devices.

Thunder SSLi works with the major security vendors, which may be deployed in a number of ways in the "secure decrypt zone", ensuring that the whole network is secure against encrypted threats. Thunder SSLi interoperates with:

- Firewalls
- Secure Web Gateways (SWG)
- Intrusion Prevention Systems (IPS)
- Unified Threat Management (UTM) platforms
- Data Loss Prevention (DLP) products
- Threat Prevention platforms
- Network Forensics and Web Monitoring tools

Secure

Key Storage

Storing encryption keys on many appliances in the network can introduce serious vulnerabilities. Threat actors can acquire keys from vulnerable points and use them for encrypted attacks or data extraction.

With FIPS 140-2 Level 3-validated internal and external Hardware Security Module (HSM) support, Thunder SSLi reduces decryption points so encryption keys are stored securely.

Validate

Certificate Status

Attackers can use invalid certificates to infiltrate networks. If these attacks are not blocked, users can be at risk of multiple attacks.

Thunder SSLi helps the system confirm the validity of certificates it receives from the server by supporting Certificate Revocation Lists (CRL) and Online Certificate Status Protocol (OCSP). These protocols help verify the origin certificate is valid.

Ensure Compliance and Privacy

Thunder SSLi allows for selective decryption, making sure that organizations can keep up with industry, government and other compliance and privacy standards. For example, HIPAA compliance may forbid the decryption of private and sensitive healthcare information.

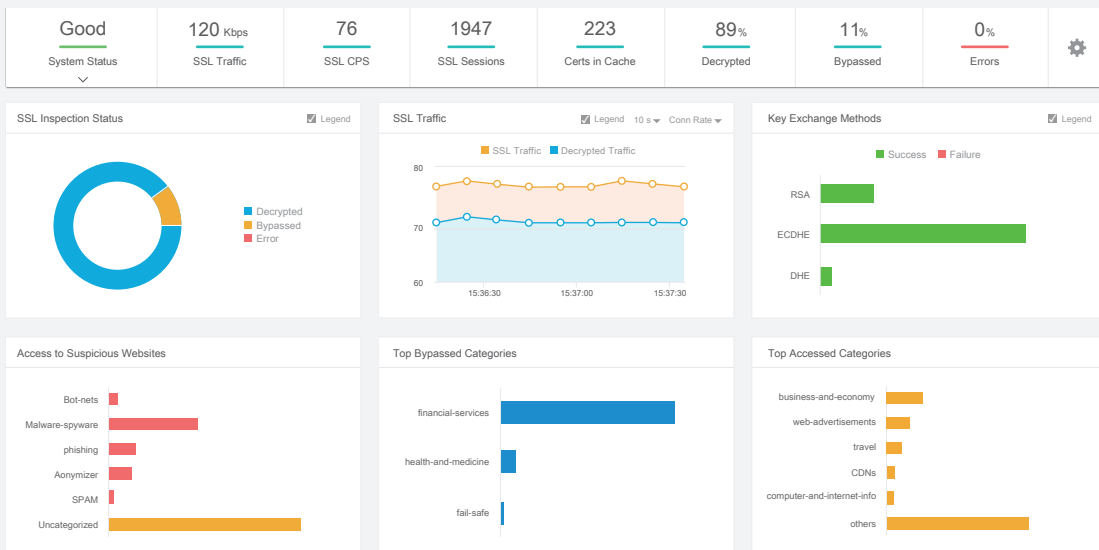

Reduce Operational Costs

Thunder SSLi offers a centralized point to decrypt enterprise traffic, forwarding it to many inline and non-inline security devices. This eliminates the decryption overhead of each security device, improving performance while maintaining proper security diligence. It also eliminates the need to purchase bigger security devices just to support resource-exhausting decryption and encryption functions.

Simplify Operations and Management

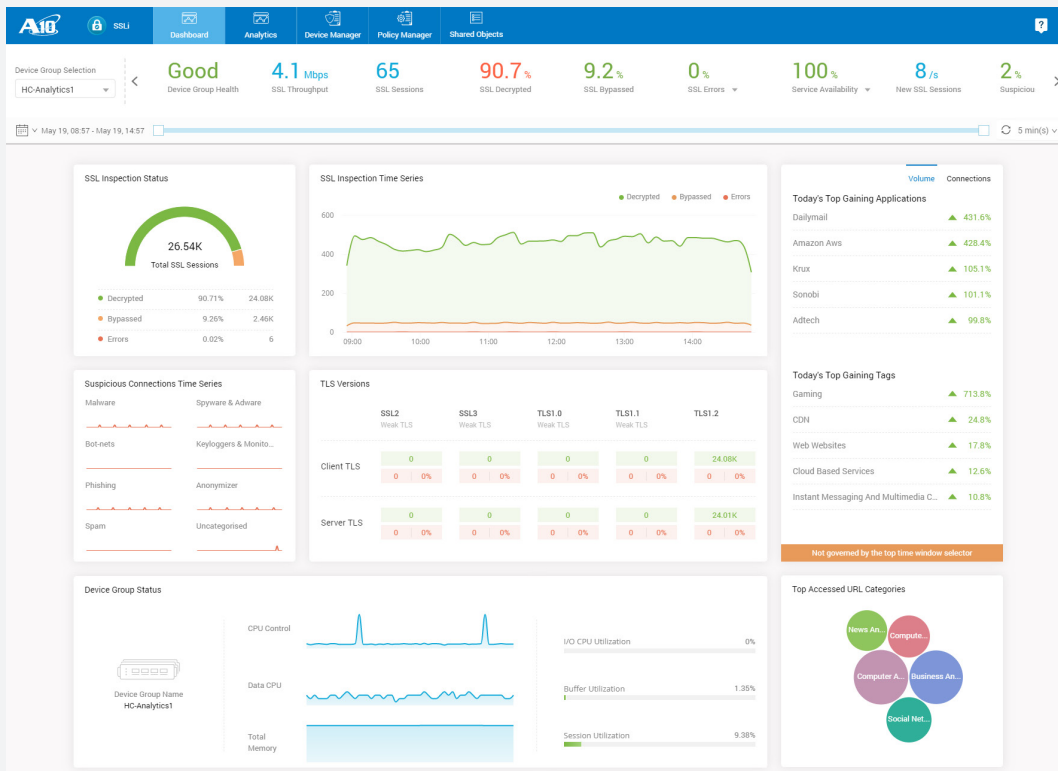

A wizard-based "on the box" configuration, deployment and management tool, AppCentric Templates make Thunder SSLi the easiest-to-use decryption solution in the industry. With informative dashboards, organizations can track their network with ease. Thunder SSLi also includes an industry-standard CLI, a web user interface and a RESTful API (aXAPI®), which integrates with third-party or custom management consoles.

AppCentric Templates help users manage their encrypted traffic using a dashboard to visualize SSL traffic, decryption and encryption, bypassing, traffic management using categorization, and more.

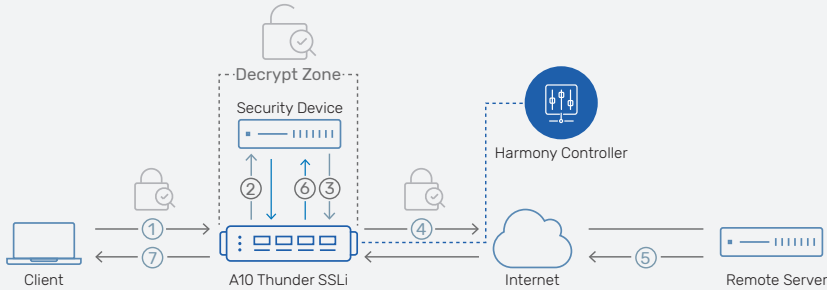

A10 Harmony™ Controller provides centralized management and rich analytics for multiple Thunder devices from multiple branch offices into one centralized and condensed console. Distributed Thunder devices can be configured and managed through Harmony Controller from a central location. Harmony Controller can display either individual Thunder device statistics or as a aggregated into an intuitive dashboard for faster troubleshooting and rich analytics.

A10 Harmony Controller provides centralized management and analytics for complete visibility into all SSLi instances. Dashboard can be populated for each SSLi instance individually or in aggregated fashion providing a holistic view into traffic patterns.

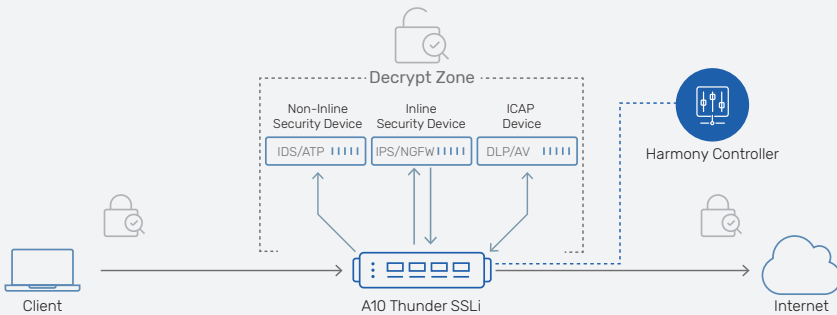

Reference Architectures

- ① Encrypted traffic from the client is intercepted by Thunder SSLI and decrypted.
- ② Thunder SSLI sends the decrypted traffic to a security device, which inspects it in clear-text.
- ③ The security device, after inspection, sends the traffic back to Thunder SSLI, which intercepts and re-encrypts it.
- ④ Thunder SSLI sends the re-encrypted traffic to the server.
- ⑤ The server processes the request and sends an encrypted response to Thunder SSLI.
- ⑥ Thunder SSLI decrypts the response traffic and forwards it to the same security device for inspection.
- ⑦ Thunder SSLI receives the traffic from the security device, re-encrypts it and sends it to the client.

Traffic Flow Through the Decrypt Zone

Thunder SSLI provides visibility via a logical decrypt zone where third-party security devices inspect traffic for threats. Thunder SSLI can be deployed in a one- or two-appliance configuration.

Multiple Deployment & Decryption Options

Thunder SSLI may be deployed inline, on the enterprise perimeter, and can decrypt traffic for a variety of security products simultaneously, including inline, non-inline (passive/TAP) and ICAP-enabled devices.

- IBM QRadar

Others

- OPSWAT MetaDefender
- Garland Technology NPB
- Bivio Networks Cybersecurity
- Trend Micro Deep Security
- Cyphort Advanced Threat Detection
- Vectra Networks Cybersecurity

Features

Decrypt

Across Multiple Ports and Protocols

Using Dynamic Port Inspection, Thunder SSLi decrypts traffic across all TCP ports. Decryption for protocols like STARTTLS, XMPP, SMTP and POP3 are also supported.

However, the decryption functionalities are not limited to only SSL/TLS, encrypted traffic and decryption for SSH traffic is supported as well.

Full-Proxy Architecture

Thunder SSLi operates as a full-proxy, which enables adjusting of cipher suite selection for encryption. Thunder SSLi can re-negotiate to a different cipher suite of similar strength, making the solution future-proof against new ciphers or TLS versions that might be introduced to the network without notice. Thunder SSLi can ensure traffic is encrypted using the most secure ciphers, eliminating the use of compromised ciphers.

Multiple Ciphers

for PFS Support

With dedicated SSL acceleration hardware, Thunder SSLi delivers high performance with 2048-bit and 4096-bit key sizes, while supporting multiple cipher suites, including DHE and ECDHE, for perfect forward secrecy (PFS) support.

Secure HSM

for FIPS Compliance

Thunder SSLi supports both internal and external network HSMs to ensure private keys are securely stored. With industry-leading support for up to four internal HSMs (FIPS 140-2 Level 3-validated), Thunder SSLi provides high performance with better security. Thunder SSLi interoperates with existing external HSMs deployed in the network.

URL Classification

for Selective Decryption

Thunder SSLi URL classification categorizes the traffic of more than 460 million domains, selectively bypassing traffic decryption to enforce privacy policies so private/sensitive data (e.g., medical or financial records) is not decrypted, in adherence to compliance standards like HIPAA.

Explicit Proxy Support

In addition to the standard transparent proxy deployment, Thunder SSLi can also be deployed as an explicit proxy, giving more control over traffic management. Thunder SSLi can connect to multiple upstream proxy servers using proxy chaining.

URL Filtering

for Access Control

URL filtering is used to maximize employee productivity and reduce risks by blocking access to malicious websites, including malware, spam and phishing sources.

ICAP Support

Data Loss Prevention (DLP) systems typically use ICAP to connect to the network and help prevent unauthorized data exfiltration. Thunder SSLi supports ICAP connectivity simultaneously with other decryption modes. This enables a network's existing DLP systems without the purchase of extra solutions.

Load Balance

Security Devices

With load-balancing support, Thunder SSLi dramatically increases performance of firewalls and other security devices. Easily add security capacity and extend the life of existing security devices. Flexible weighted traffic priorities can be assigned.

Granular Traffic Control

Examine, update, modify or drop requests DPI using A10 aFlex® scripting. Fully control which traffic is intercepted and forwarded to a third-party security device, and which traffic should be sanitized before being sent to the intended destination.

Intelligent Service Chaining

for High-Performance Security

Selectively redirect traffic, based on application type, to different service chains with fine-grained policies. Thunder SSLi reduces latency and potential bottlenecks with the *Decrypt Once, Inspect Many Times* approach, consolidating decryption and encryption duties.

User Authentication and User-based Policies

Create security policies for users, making sure no unauthorized access is allowed, with the identity and access management feature. This also enables you to define user-ID-based traffic and inspection policies to maintain granular control.

Centralized Analytics and Management

for Thunder SSLi ****

A10 Harmony Controller provides performance monitoring and faster troubleshooting with device health status, logs and traffic pattern analysis.

Deep insights into anomalies and threats enables enterprises to set adaptive controls and policy updates through behavior analysis.

Threat Investigator

Explore the trustworthiness of websites, based on threat reputation and confidence scores. The Threat Investigator can be accessed as stand-alone AppCentric Templates as well as through the access logs.

Detailed Feature List

Features may vary by appliance

Decryption

- High-performance SSL decryption and encryption as a forward proxy
- Full-proxy architecture
- Internet Content Adaption Protocol (ICAP) support with pre-filtering for data loss prevention (DLP) and antivirus solutions
- Dynamic port decryption to detect and intercept SSL or TLS traffic regardless of TCP port number
- Bi-directional inspection for protection against incoming web threats
- Forward proxy failsafe to bypass traffic when there is a handshake failure
- Decryption bypass based on hostname; bypass list scales up to 1 million Server Name Indication (SNI) values
- Multi-bypass list support
- Extensive cipher and protocol support
 - SSL 3.0, TLS 1.0/1.1/1.2
 - RSA/DHE/ECDHE ciphers with Perfect Forward Secrecy (PFS) support
 - SHA, SHA-2, MD5 Message Authentication Code (MAC) algorithms
 - IPv4 and IPv6
 - HTTP 1.1, HTTP/2
- Decryption of HTTPS, STARTTLS, SMTP, XMPP, POP3, SSH, SCP, sFTP
- Client certificate detection and optional bypass
- Untrusted/expired certificate handling using:

- Online Certificate Status Protocol (OCSP)
- Certificate Revocation Lists (CRL)
- Detailed user and session logging
- User authentication and authorization service for identity based access control
- SaaS local breakout and access control
- Next Hop Load Distribution (NHL) for internet traffic load distribution and optimization
- TLS alert logging to log flow information from SSLi events
- SSL session ID reuse
- aFlex scripting for customizable, application-aware switching
- High Availability: Active-Active, Active-Standby configurations
- Firewall Load-Balancing (FWLB)

Hardware Security Module (HSM)

- FIPS 140-2 Level 3-validated on-board HSM (Up to four cards on a single platform)**
- External network HSM with Thales nShield

URL Classification***

- URL Bypassing for web category-based selective decryption
- URL Filtering for blocking of known malicious or undesirable websites

Deployment

- Inline transparent proxy or explicit proxy deployment with non-inline third-party devices

- Inline transparent proxy or explicit proxy deployment with inline third-party devices
- Inline transparent proxy or explicit proxy deployment with ICAP-connected devices
- Inline transparent proxy or explicit proxy deployment with third-party transparent and explicit proxy devices using proxy chaining

Threat Investigator

- Rich and contextual analytics for object under investigation

Management

- Dedicated on-box management interface (GUI, CLI, SSH, Telnet)
- Web-based AppCentric Templates (ACT) support
- SNMP, syslog, email alerts
- RESTful API (aXAPI)
- LDAP, TACACS+, RADIUS support
- Configurable control CPUs
- Centralized management and analytics with Harmony Controller****

Virtualization

- vThunder virtual appliance for VMware vSphere ESXi, Microsoft Hyper-V and KVM
- A10 Thunder on Dell Technologies OEM Solution Bundle

* Features may vary by appliance.

** Available on select models.

*** URL Classification for URL Filtering and Bypassing subscriptions are available as an additional paid service, powered by Webroot.

****Harmony Controller required
